All the same nifty features—tools like grids, the ability to sort layers, the retouching toolkit, and even live view—are delivered via the familiar, up-and-over-the-desktop icon set. The Photoshop interface changes slightly, with additional buttons for the grids and tool palette. Using the new technology, the new global style inheritance is very important. It only matters when you've bought a second asset from a second photographer. In this case you can see exactly which Photoshop styles are applied to the new image. You can also remove that look from something that's pretty unique. You can also remove the styles of the top layers and only apply the new look to layers underneath—so if you've made some steps after the fact, you can undo them. If you're doing this, you can use the Layer > Delete Styles command. Adobe servers carry the essence of every Adobe Photoshop subscription through an account called the “network.” You can access this pool of computing power—which may make image processing go a lot faster—from any computer. You can also access the network to create Web galleries, manipulate and share files, or work with other people through a Web service called Adobe ExtendSocial. To access this service, login to your Photoshop account using a web browser. Go to <http://adobeforphotoshop.com/social/intro.aspx>. All of these features are available in the version of Photoshop CS5 for both Mac and Windows. But if you're in the holiday gift giving mood, I'd recommend waiting until you can visit a Adobe store or see one more likely to be in your local mall.
