How to Change the Language on a Panasonic Strada CN-DV155 from Japanese to English

If you have a Panasonic Strada CN-DV155 car navigation system that is in Japanese, you may be wondering how to change it to English. Unfortunately, this model is designed for the Japanese market only and does not have an option to switch languages. However, there are some possible workarounds that you can try to make it more user-friendly.

Reset the Device

One option is to reset the device to factory settings. This may bring up an initial setup screen with language choices. To do this, you need to press and hold the power button for about 10 seconds until the screen goes blank. Then, press the power button again to turn it on. You should see a screen with two buttons on the lower left and lower right. Select the left-hand button, then select one of the three languages that appear. English may be the left-most button of the three, but this is not guaranteed. If none of the languages are in English, you can try another reset or move on to the next option.

Download a Software Update

Another option is to download a software update that may include an English language option. However, this is not an official solution and may not work for all devices. You also need to be careful about downloading files from unknown sources, as they may contain viruses or malware that can harm your device or your computer. To download a software update, you need to find a file named "panasonic strada cn dv155 japan english.zip" on the internet. This file may be available on some websites or torrent sites, but you need to verify its authenticity and safety before downloading it. Once you have downloaded the file, you need to extract it and copy it to a USB flash drive or an SD card. Then, insert the USB flash drive or SD card into your device and follow the instructions on the screen to install the update. This may change your device's language to English, but it may also cause some errors or glitches.

Use a Translation App

A third option is to use a translation app on your smartphone or tablet to help you navigate the device's menus and settings. You can use an app that can scan and translate text from images, such as Google Translate or Microsoft Translator. To use this option, you need to launch the app on your smartphone or tablet and point its camera at your device's screen. The app will then show you a translation of the text on your screen in English or any other language you choose. You can use this method to access various functions and features of your device, such as setting the time and date, adjusting the volume and brightness, selecting a destination, etc.

Conclusion

The Panasonic Strada CN-DV155 is a car navigation system that is made for the Japanese market only and does not have an option to change languages. However, you can try some possible workarounds to make it more user-friendly, such as resetting the device, downloading a software update, or using a translation app. These methods are not guaranteed to work for all devices and may have some risks or limitations. Therefore, you should use them at your own discretion and responsibility.
